ACG SELECTS AEI B737-400SF 11 PALLET CONFIGURATION CONVERSION

MIAMI, FL., --July 19, 2010-- Aeronautical Engineers, Inc. (AEI), is pleased to announce that it has been selected by Aviation Capital Group (ACG) to provide two B737-400SF 11 Pallet Configuration Passenger to Freighter Conversions. The first aircraft, a high gross weight B737-400 (MSN 25063) was built in 1991 and is currently undergoing freighter modification and heavy maintenance at AEI's Authorized Conversion Center, Commercial Jet, Inc. which is located in Miami, Florida. ACG's second aircraft is expected to be inducted for conversion by year end.

Mr. Robert T. Convey, Vice President of Sales & Marketing, stated that "We are seeing an overwhelming response to our new B737-400SF 11 Pallet Configuration, which was launched only a few short months ago. The first ACG aircraft has been leased to VarigLog, an affiliate of the Synergy Group, and is scheduled to enter service in Brazil following conversion. This will be the first B737-400SF aircraft to be registered and operated in Brazil."

AEI's Brazilian Certified B737-400SF 11 Pallet Configuration will provide Synergy affiliate Varig Logistics with an Ancra equipped Main Deck Cargo Loading System capable of carrying:

- Ten Full Height 88"x125"x82" AAA container positions in P1-P10 and a 53"x88"x64" high pallet in P11
(More full height AAA's than any other B737-400 conversion)

This unique configuration will allow operators to maximize the interior volume of the B737-400SF by the addition of a tenth AAA ULD position.

About AEI

Formed in 1958, Aeronautical Engineers, Inc. (AEI) is the oldest conversion company in existence today. For more than 50 years AEI has provided advanced engineering solutions to aircraft owners and operators. Today the company is a global leader in passenger to freighter conversions for a wide array of aircraft, helping customers extend the life of the aircraft and increase the value of their asset. AEI has developed over 120 Supplemental Type Certificates (STCs) and 360+ aircraft have been modified with AEI STCs – more than any other conversion provider.

About ACG

ACG is the owner and manager of a diversified fleet of commercial jet aircraft leased to the world's leading airlines. Its portfolio includes 242 aircraft leased to 99 airlines in 40 countries. ACG also provides asset management and re-marketing services to aircraft investors and institutional clients. ACG was founded in 1989 and is a wholly owned subsidiary of Pacific Life Insurance Company, a Pacific LifeCorp company.
